

Finding Symmetry in Nature

**Family Note**

A picture or an object has symmetry if it can be folded in half so that the two halves match exactly. In today's lesson, the class explored symmetry by cutting out designs from folded paper.

To continue our exploration of symmetry, help your child find pictures that show symmetry in nature; for example, pictures of butterflies, leaves, animal markings, flowers, or snowflakes.

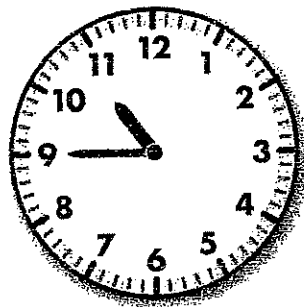

Please return this Home Link to school tomorrow.

1. Find symmetrical pictures in magazines.

Cut out your favorite pictures and glue them onto this page.

Practice

2. Record the time.

quarter-to _____ o'clock
